

Waterproof IceSpy sensors and item numbers

All sensors for IceSpy equipment remain fully waterproof.

As part of our commitment to product excellence, we have decided to upgrade all IceSpy sensors to be waterproof (IN-PTxxx and IN-THxxx).

Previously, our sensor cables were distinguished by their orange color, signifying their waterproof nature.

However, we are now transitioning to using ONLY waterproof black or white sensor cables for all the IceSpy hardware.

Please note that the orange sensor cable and W-item numbers (e.g. 33467803W) is now obsolete as part of this transition, and we will no longer be offering non-waterproof sensors as part of our IceSpy solution going forward.

If a customer needs a waterproof sensor this is ordered through designated item number without the letter W.

Should you have any questions or concerns about this update, please do not hesitate to contact Brand Management.

*Best Regards,
Brand Management
